

NEW HIGH SCHOOL COURSE IN IRAN: DRONE HACKING

AP informs us that a reformist newspaper in Iran has a story on a new course to be taught in high schools in Iran beginning in September:

Iran's powerful Revolutionary Guards paramilitary units plan to teach drone-hunting to school students, an Iranian newspaper reported Monday.

The report by pro-reform Etemad daily quoted Gen. Ali Fazli, acting commander of the Guard's Basij militia, as saying the new program will be taught as part of a "Defensive Readiness" lesson in high schools from late September.

And just how would these drones be "hunted"? By hacking them, of course:

He did not elaborate but the plan suggests students would be taught how to track and bring down drone aircraft by hacking their computer systems.

But students could never hack a drone, could they?

But, but, the video tells us that military drones are much more secure against hacking than civilian drones, aren't they? Oh, wait. Wow, that was even the latest drone model the Iranians hacked?

I'm calling dibs on the Persian translation of "See something, hack something".
