U.S. Supreme Court

Motor Veh. Mfrs. Ass'n v. State Farm Ins., 463 U.S. 29 (1983)

Motor Vehicle Manufacturers Association of the United States, Inc.

v. State Farm Mutual Automobile Insurance Co.

No. 82-354

Argued April 26, 1983

Decided June 24, 1983*

463 U.S. 29

*CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR
THE DISTRICT OF COLUMBIA CIRCUIT*

Syllabus

The National Traffic and Motor Vehicle Safety Act of 1966 (Act) directs the Secretary of Transportation to issue motor vehicle safety standards that "shall be practicable, shall meet the need for motor vehicle safety, and shall be stated in objective terms." In issuing these standards, the Secretary is directed to consider "relevant available motor vehicle safety data," whether the proposed standard is "reasonable, practicable and appropriate" for the particular type of motor vehicle for which it is prescribed, and "the extent to which such standards will contribute to carrying out the purposes" of the Act. The Act authorizes judicial review, under the Administrative Procedure Act, of "all orders establishing, amending, or revoking" a motor vehicle safety standard. The National Highway Traffic Safety Administration (NHTSA), to which the Secretary has delegated his authority to promulgate safety standards, rescinded the requirement of Modified Standard 208 that new motor vehicles produced after September 1982 be equipped with passive restraints (automatic seatbelts or airbags) to protect the safety of the occupants of the vehicle in the event of a collision. In explaining the rescission, NHTSA maintained that it was no longer able to find, as it had in 1977 when Modified Standard 208 was issued, that the automatic restraint requirement would produce significant safety benefits. In 1987, NHTSA had assumed that airbags would be installed in 60% of all new cars and automatic seatbelts in 40%. But by 1981 it became apparent that automobile manufacturers planned to install automatic seatbelts in approximately 99% of the new cars, and that the overwhelming majority of such seatbelts could be easily detached and left that way permanently, thus precluding the realization of the lifesaving potential of airbags and requiring the same type of affirmative action that was the stumbling block

Page 463 U. S. 30

to achieving high usage of manual belts. For this reason, NHTSA concluded that there was no longer a basis for reliably predicting that Modified Standard 208 would lead to any significant increased usage of restraints. Hence, in NHTSA's view, the automatic restraint requirement was no longer reasonable or practicable. Moreover, given the high expense of implementing such a requirement and the limited benefits arising therefrom, NHTSA feared that many consumers would regard Modified Standard 208 as an instance of ineffective regulation. On petitions for review of NHTSA's rescission of the passive restraint requirement, the Court of Appeals held that the rescission was arbitrary and capricious on the grounds that NHTSA's conclusion that it could not reliably predict an increase in belt usage under the Standard was an insufficient basis for the rescission, that NHTSA inadequately considered the possibility of requiring manufacturers to install nondetachable, rather than detachable, passive belts, and that the agency failed to give any consideration to requiring compliance with the Standard by the installation of airbags. The court found that congressional reaction to various versions of the Standard "raised doubts" that NHTSA's rescission "necessarily demonstrates an effort to fulfill its statutory mandate," and that therefore the agency was obligated to provide "increasingly clear and convincing reasons" for its action.

Held: NHTSA's rescission of the passive restraint requirement in Modified Standard 208 was arbitrary and capricious; the agency failed to present an adequate basis and explanation for rescinding the requirement, and must either consider the matter further or adhere to or amend the Standard along lines which its analysis supports. Pp. [463 U. S. 40](#)-57.

(a) The rescission of an occupant crash protection standard is subject to the same standard of judicial review -- the "arbitrary and capricious" standard -- as is the promulgation of such a standard, and should not be judged by, as petitioner Motor Vehicle Manufacturers Association contends, the standard used to judge an

agency's refusal to promulgate a rule in the first place. The Act expressly equates orders "revoking" and "establishing" safety standards. The Association's view would render meaningless Congress' authorization for judicial review of orders revoking safety standards. An agency changing its course by rescinding a rule is obligated to supply a reasoned analysis for the change beyond that which may be required when an agency does not act in the first instance. While the scope of review under the "arbitrary and capricious" standard is narrow, and a court is not to substitute its judgment for that of the agency, the agency nevertheless must examine the relevant data and articulate a satisfactory explanation for its action. In reviewing that explanation, a court must consider whether the decision was based on a

Page 463 U. S. 31

consideration of the relevant factors and whether there was a clear error of judgment. Pp. [463 U. S. 40](#)-44.

(b) The Court of Appeals correctly found that the "arbitrary and capricious" standard of judicial review applied to rescission of agency regulations, but erred in intensifying the scope of its review based upon its reading of legislative events. While an agency's interpretation of a statute may be confirmed or ratified by subsequent congressional failure to change that interpretation, here, even an unequivocal ratification of the passive restraint requirement would not connote approval or disapproval of NHTSA's later decision to rescind the requirement. That decision remains subject to the "arbitrary and capricious" standard. Pp. [463 U. S. 44](#)-46.

(c) The first reason for finding NHTSA's rescission of Modified Standard 208 was arbitrary and capricious is that it apparently gave no consideration to modifying the Standard to require that airbag technology be utilized. Even if NHTSA's conclusion that detachable automatic seatbelts will not attain anticipated safety benefits because so many individuals will detach the mechanism were acceptable in its entirety, standing alone, it would not justify any more than an amendment of the Standard to disallow compliance by means of one technology which will not provide effective passenger protection. It does not cast doubt on the need for a passive restraint requirement or upon the efficacy of airbag technology. The airbag is more than a policy alternative to the passive restraint requirement; it is a technology alternative within the ambit of the existing standard. Pp. [463 U. S. 46](#)-51.

(d) NHTSA was too quick to dismiss the safety benefits of automatic seatbelts. Its explanation for rescission of the passive restraint requirement is not sufficient to enable this Court to conclude that the rescission was the product of reasoned decisionmaking. The agency took no account of the critical difference between detachable automatic seatbelts and current manual seatbelts, failed to articulate a basis for not requiring nondetachable belts, and thus failed to offer the rational connection between facts and judgment required to pass muster under the "arbitrary and capricious" standard. Pp. [463 U. S. 51](#)-57.

220 U.S.App.D.C. 170, [680 F.2d 206](#), vacated and remanded.

WHITE, J., delivered the opinion of the Court, in which BRENNAN, MARSHALL, BLACKMUN, and STEVENS, JJ., joined, and in all but Parts V-B and VI of which BURGER, C.J., and POWELL, REHNQUIST and O'CONNOR, JJ., joined. REHNQUIST, J., filed an opinion concurring in part and dissenting in part, in which BURGER, C.J., and POWELL and O'CONNOR, JJ., joined, *post*, p. [463 U. S. 57](#).

Page 463 U. S. 32

JUSTICE WHITE delivered the opinion of the Court.

The development of the automobile gave Americans unprecedented freedom to travel, but exacted a high price for

Page 463 U. S. 33

enhanced mobility. Since 1929, motor vehicles have been the leading cause of accidental deaths and injuries in the United States . In 1982, 46,300 Americans died in motor vehicle accidents, and hundreds of thousands more were maimed and injured. [\[Footnote 1\]](#) While a consensus exists that the current loss of life on our highways is unacceptably high, improving safety does not admit to easy solution. In 1966, Congress decided that at least part of the answer lies in improving the design and safety features of the vehicle itself.

[\[Footnote 2\]](#) But much of the technology for building safer cars was undeveloped or untested. Before changes in automobile design could be mandated, the effectiveness of these changes had to be studied, their costs examined, and public acceptance considered. This task called for considerable expertise, and Congress responded by enacting the National Traffic and Motor Vehicle Safety Act of 1966 (Act), 80 Stat. 718, as amended, 15 U. S. C. §1381 *et seq.* (1976 ed. and Supp. V). The Act, created for the purpose of "reduc[ing] traffic accidents and deaths and injuries to persons resulting from traffic accidents," 15 U. S. C. §1381, directs the Secretary of Transportation or his delegate to issue motor vehicle safety standards that "shall be practicable, shall meet the need for motor vehicle safety, and shall be stated in objective terms." 15 U.S.C. §1392(a) (1976 ed., Supp. V). In issuing these standards, the Secretary is directed to consider "relevant available motor vehicle safety data," whether the proposed standard "is reasonable, practicable and appropriate" for the particular type of motor vehicle, and the "extent to which

Page 463 U. S. 34

such standards will contribute to carrying out the purposes" of the Act. 15 U.S.C. §§ 1392(f)(1), (3), (4).

[\[Footnote 3\]](#)

The Act also authorizes judicial review under the provisions of the Administrative Procedure Act (APA), 5 U.S.C. § 706, of all "orders establishing, amending, or revoking a Federal motor vehicle safety standard," 15 U.S.C. § 1392(b). Under this authority, we review today whether NHTSA acted arbitrarily and capriciously in revoking the requirement in Motor Vehicle Safety Standard 208 that new motor vehicles produced after September, 1982, be equipped with passive restraints to protect the safety of the occupants of the vehicle in the event of a collision. Briefly summarized, we hold that the agency failed to present an adequate basis and explanation for rescinding the passive restraint requirement, and that the agency must either consider the matter further or adhere to or amend Standard 208 along lines which its analysis supports.

I

The regulation whose rescission is at issue bears a complex and convoluted history. Over the course of approximately 60 rulemaking notices, the requirement has been imposed, amended, rescinded, reimposed, and now rescinded again.

As originally issued by the Department of Transportation in 1967, Standard 208 simply required the installation of seatbelts in all automobiles. 32 Fed.Reg. 2415. It soon became apparent that the level of seatbelt use was too low to reduce traffic injuries to an acceptable level. The Department therefore began consideration of "passive occupant restraint systems" -- devices that do not depend for their effectiveness

Page 463 U. S. 35

upon any action taken by the occupant except that necessary to operate the vehicle. Two types of automatic crash protection emerged: automatic seatbelts and airbags. The automatic seatbelt is a traditional safety belt, which, when fastened to the interior of the door, remains attached without impeding entry or exit from the vehicle and deploys automatically without any action on the part of the passenger. The airbag is an inflatable device concealed in the dashboard and steering column. It automatically inflates when a sensor indicates that deceleration forces from an accident have exceeded a preset minimum, then rapidly deflates to dissipate those forces. The lifesaving potential of these devices was immediately recognized, and in 1977, after substantial on-the-road experience with both devices, it was estimated by NHTSA that passive restraints could prevent approximately 12,000 deaths and over 100,000 serious injuries annually. 42 Fed.Reg. 34298.

In 1969, the Department formally proposed a standard requiring the installation of passive restraints, 34 Fed.Reg. 11148, thereby commencing a lengthy series of proceedings. In 1970, the agency revised Standard 208 to include passive protection requirements, 35 Fed.Reg. 16927, and in 1972, the agency amended the Standard to require full passive protection for all front seat occupants of vehicles manufactured after August 15, 1975. 37 Fed.Reg. 3911. In the interim, vehicles built between August, 1973, and August, 1975, were to carry either passive restraints or lap and shoulder belts coupled with an "ignition interlock" that would prevent starting the vehicle if the belts were not connected. [[Footnote 4](#)] On review, the

Page 463 U. S. 36

agency's decision to require passive restraints was found to be supported by "substantial evidence," and upheld. *Chrysler Corp. v. Department of Transportation*, [472 F.2d 659](#) (CA6 1972). [[Footnote 5](#)]

In preparing for the upcoming model year, most car makers chose the "ignition interlock" option, a decision which was highly unpopular and led Congress to amend the Act to prohibit a motor vehicle safety standard from requiring or permitting compliance by means of an ignition interlock or a continuous buzzer designed to indicate that safety belts were not in use. Motor Vehicle and Schoolbus Safety Amendments of 1974, Pub.L. 93-492, § 109, 88 Stat. 1482, 15 U.S.C. § 1410b(b). The 1974 Amendments also provided that any safety standard that could be satisfied by a system other than seatbelts would have to be submitted to Congress, where it could be vetoed by concurrent resolution of both Houses. 15 U.S.C. § 1410b(b)(2). [[Footnote 6](#)]

The effective date for mandatory passive restraint systems was extended for a year until August 31, 1976. 40 Fed.Reg. 16217 (1975); *id.* at 33977. But in June, 1976, Secretary of Transportation William T. Coleman, Jr., initiated a new rulemaking on the issue, 41 Fed.Reg. 24070. After hearing testimony and reviewing written comments, Coleman extended the optional alternatives indefinitely and suspended the passive restraint requirement. Although he found passive

Page 463 U. S. 37

restraints technologically and economically feasible, the Secretary based his decision on the expectation that there would be widespread public resistance to the new systems. He instead proposed a demonstration project involving up to 500,000 cars installed with passive restraints, in order to smooth the way for public acceptance of mandatory passive restraints at a later date. Department of Transportation, The Secretary's

Decision Concerning Motor Vehicle Occupant Crash Protection (Dec. 6, 1976), App. 2068.

Coleman's successor as Secretary of Transportation disagreed. Within months of assuming office, Secretary Brock Adams decided that the demonstration project was unnecessary. He issued a new mandatory passive restraint regulation, known as Modified Standard 208. 42 Fed.Reg. 34289 (1977); 49 CFR § 571.208 (1978). The Modified Standard mandated the phasing in of passive restraints beginning with large cars in model year 1982 and extending to all cars by model year 1984. The two principal systems that would satisfy the Standard were airbags and passive belts; the choice of which system to install was left to the manufacturers. In *Pacific Legal Foundation v. Department of Transportation*, 193 U.S.App.D.C. 184, [593 F.2d 1338](#), cert. denied, 444 U.S. 830 (1979), the Court of Appeals upheld Modified Standard 208 as a rational, nonarbitrary regulation consistent with the agency's mandate under the Act. The Standard also survived scrutiny by Congress, which did not exercise its authority under the legislative veto provision of the 1974 Amendments. [[Footnote 7](#)]

Over the next several years, the automobile industry geared up to comply with Modified Standard 208. As late as July, 1980, NHTSA reported:

Page 463 U. S. 38

"On-the-road experience in thousands of vehicles equipped with air bags and automatic safety belts has confirmed agency estimates of the life-saving and injury-preventing benefits of such systems. When all cars are equipped with automatic crash protection systems, each year an estimated 9,000 more lives will be saved, and tens of thousands of serious injuries will be prevented."

NHTSA, Automobile Occupant Crash Protection, Progress Report No. 3, p. 4; App. in No. 81-2220 (CADDC), p. 1627 (hereinafter App.). In February, 1981, however, Secretary of Transportation Andrew Lewis reopened the rulemaking due to changed economic circumstances and, in particular, the difficulties of the automobile industry. 46 Fed.Reg. 12033. Two months later, the agency ordered a one-year delay in the application of the Standard to large cars, extending the deadline to September 1982, *id.* at 21172, and at the same time, proposed the possible rescission of the entire Standard. *Id.* at 21205. After receiving written comments and holding public hearings, NHTSA issued a final rule (Notice 25) that rescinded the passive restraint requirement contained in Modified Standard 208.

II

In a statement explaining the rescission, NHTSA maintained that it was no longer able to find, as it had in 1977, that the automatic restraint requirement would produce significant safety benefits. Notice 25, *id.* at 53419. This judgment reflected not a change of opinion on the effectiveness of the technology, but a change in plans by the automobile industry. In 1977, the agency had assumed that airbags would be installed in 60% of all new cars and automatic seatbelts in 40%. By 1981, it became apparent that automobile manufacturers planned to install the automatic seatbelts in approximately 99% of the new cars. For this reason, the lifesaving potential of airbags would not be realized. Moreover, it now appeared that the overwhelming majority of passive belts

Page 463 U. S. 39

planned to be installed by manufacturers could be detached easily and left that way permanently. Passive belts, once detached, then required "the same type of affirmative action that is the stumbling block to

obtaining high usage levels of manual belts." *Id.* at 53421. For this reason, the agency concluded that there was no longer a basis for reliably predicting that the Standard would lead to any significant increased usage of restraints at all.

In view of the possibly minimal safety benefits, the automatic restraint requirement no longer was reasonable or practicable in the agency's view. The requirement would require approximately \$1 billion to implement, and the agency did not believe it would be reasonable to impose such substantial costs on manufacturers and consumers without more adequate assurance that sufficient safety benefits would accrue. In addition, NHTSA concluded that automatic restraints might have an adverse effect on the public's attitude toward safety. Given the high expense and limited benefits of detachable belts, NHTSA feared that many consumers would regard the Standard as an instance of ineffective regulation, adversely affecting the public's view of safety regulation and, in particular, "poisoning . . . popular sentiment toward efforts to improve occupant restraint systems in the future." *Id.* at 53424.

State Farm Mutual Automobile Insurance Co. and the National Association of Independent Insurers filed petitions for review of NHTSA's rescission of the passive restraint Standard. The United States Court of Appeals for the District of Columbia Circuit held that the agency's rescission of the passive restraint requirement was arbitrary and capricious. 220 U.S.App.D.C. 170, [680 F.2d 206](#) (1982). While observing that rescission is not unrelated to an agency's refusal to take action in the first instance, the court concluded that, in this case, NHTSA's discretion to rescind the passive restraint requirement had been restricted by various forms of congressional "reaction" to the passive restraint issue. It then

Page 463 U. S. 40

proceeded to find that the rescission of Standard 208 was arbitrary and capricious for three reasons. First, the court found insufficient as a basis for rescission NHTSA's conclusion that it could not reliably predict an increase in belt usage under the Standard. The court held that there was insufficient evidence in the record to sustain NHTSA's position on this issue, and that, "only a well justified refusal to seek more evidence could render rescission non-arbitrary." *Id.* at 196, [680 F.2d 232](#). Second, a majority of the panel [[Footnote 8](#)] concluded that NHTSA inadequately considered the possibility of requiring manufacturers to install nondetachable, rather than detachable, passive belts. Third, the majority found that the agency acted arbitrarily and capriciously by failing to give any consideration whatever to requiring compliance with Modified Standard 208 by the installation of airbags.

The court allowed NHTSA 30 days in which to submit a schedule for "resolving the questions raised in th[e] opinion." *Id.* at 206, [680 F.2d 242](#). Subsequently, the agency filed a Notice of Proposed Supplemental Rulemaking setting forth a schedule for complying with the court's mandate. On August 4, 1982, the Court of Appeals issued an order staying the compliance date for the passive restraint requirement until September 1, 1983, and requested NHTSA to inform the court whether that compliance date was achievable. NHTSA informed the court on October 1, 1982, that, based on representations by manufacturers, it did not appear that practicable compliance could be achieved before September, 1985. On November 8, 1982, we granted certiorari, 459 U.S. 987, and on November 18, the Court of Appeals entered an order recalling its mandate.

III

Unlike the Court of Appeals, we do not find the appropriate scope of judicial review to be the "most troublesome

Page 463 U. S. 41

question" in these cases. Both the Act and the 1974 Amendments concerning occupant crash protection standards indicate that motor vehicle safety standards are to be promulgated under the informal rulemaking procedures of the Administrative Procedure Act, 5 U.S.C. § 553. The agency's action in promulgating such standards therefore may be set aside if found to be "arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law." 5 U.S.C. § 706(2)(A); *Citizens to Preserve Overton Park v. Volpe*, [401 U. S. 402](#), [401 U. S. 414](#) (1971); *Bowman Transportation, Inc. v. Arkansas-Best Freight System, Inc.*, [419 U. S. 281](#) (1974). We believe that the rescission or modification of an occupant protection standard is subject to the same test. Section 103(b) of the Act, 15 U.S.C. § 1392(b), states that the procedural and judicial review provisions of the Administrative Procedure Act "shall apply to all orders establishing, amending, or revoking a Federal motor vehicle safety standard," and suggests no difference in the scope of judicial review depending upon the nature of the agency's action.

Petitioner Motor Vehicle Manufacturers Association (MVMA) disagrees, contending that the rescission of an agency rule should be judged by the same standard a court would use to judge an agency's refusal to promulgate a rule in the first place -- a standard petitioner believes considerably narrower than the traditional arbitrary and capricious test. We reject this view. The Act expressly equates orders "revoking" and "establishing" safety standards; neither that Act nor the APA suggests that revocations are to be treated as refusals to promulgate standards. Petitioner's view would render meaningless Congress' authorization for judicial review of orders revoking safety rules. Moreover, the revocation of an extant regulation is substantially different than a failure to act. Revocation constitutes a reversal of the agency's former views as to the proper course. A

"settled course of behavior embodies the agency's informed judgment that, by pursuing that course, it will carry out the policies

Page 463 U. S. 42

committed to it by Congress. There is, then, at least a presumption that those policies will be carried out best if the settled rule is adhered to."

Atchison, T. & S. F. R. Co. v. Wichita Bd. of Trade, [412 U. S. 800](#), [412 U. S. 807-808](#) (1973). Accordingly, an agency changing its course by rescinding a rule is obligated to supply a reasoned analysis for the change beyond that which may be required when an agency does not act in the first instance.

In so holding, we fully recognize that "[r]egulatory agencies do not establish rules of conduct to last forever," *American Trucking Assns., Inc. v. Atchison, T. & S. F. R. Co.*, [387 U. S. 397](#), [387 U. S. 416](#) (1967), and that an agency must be given ample latitude to "adapt their rules and policies to the demands of changing circumstances." *Permian Basin Area Rate Cases*, [390 U. S. 747](#), [390 U. S. 784](#) (1968). But the forces of change do not always or necessarily point in the direction of deregulation. In the abstract, there is no more reason to presume that changing circumstances require the rescission of prior action, instead of a revision in or even the extension of current regulation. If Congress established a presumption from which judicial review should start, that presumption -- contrary to petitioners' views -- is not against safety regulation, but *against* changes in current policy that are not justified by the rulemaking record. While the removal of a regulation may not entail the monetary expenditures and other costs of enacting a new standard, and, accordingly, it may be easier for an agency to justify a deregulatory action, the direction in which an agency chooses to move does not alter the standard of judicial review established by law.

The Department of Transportation accepts the applicability of the "arbitrary and capricious" standard. It argues that, under this standard, a reviewing court may not set aside an agency rule that is rational, based on consideration of the relevant factors, and within the scope of the authority delegated to the agency by the statute. We do not disagree with

Page 463 U. S. 43

this formulation. [Footnote 9] The scope of review under the "arbitrary and capricious" standard is narrow, and a court is not to substitute its judgment for that of the agency. Nevertheless, the agency must examine the relevant data and articulate a satisfactory explanation for its action, including a "rational connection between the facts found and the choice made." *Burlington Truck Lines, Inc. v. United States*, 371 U. S. 156, 371 U. S. 168 (1962). In reviewing that explanation, we must "consider whether the decision was based on a consideration of the relevant factors and whether there has been a clear error of judgment." *Bowman Transportation, Inc. v. Arkansas-Best Freight System, Inc.*, *supra*, at 419 U. S. 285; *Citizens to Preserve Overton Park v. Volpe*, *supra*, at 401 U. S. 416. Normally, an agency rule would be arbitrary and capricious if the agency has relied on factors which Congress has not intended it to consider, entirely failed to consider an important aspect of the problem, offered an explanation for its decision that runs counter to the evidence before the agency, or is so implausible that it could not be ascribed to a difference in view or the product of agency expertise. The reviewing court should not attempt itself to make up for such deficiencies; we may not supply a reasoned basis for the agency's action that the agency itself has not given. *SEC v. Chenery Corp.*, 332 U. S. 194, 332 U. S. 196 (1947). We will, however, "uphold a decision of less than ideal clarity if the agency's path may reasonably be discerned." *Bowman Transportation, Inc. v. Arkansas-Best Freight System, Inc.*, *supra*, at 419 U. S. 286. See also *Camp v. Pitts*, 411 U. S. 138, 411 U. S. 142-143 (1973) (per curiam). For purposes of these cases, it is also relevant that Congress required a record of the rulemaking proceedings to be compiled

Page 463 U. S. 44

and submitted to a reviewing court, 15 U.S.C. § 1394, and intended that agency findings under the Act would be supported by "substantial evidence on the record considered as a whole." S.Rep. No. 1301, 89th Cong., 2d Sess., 8 (1966); H.R.Rep. No. 1776, 89th Cong., 2d Sess., 21 (1966).

IV

The Court of Appeals correctly found that the arbitrary and capricious test applied to rescissions of prior agency regulations, but then erred in intensifying the scope of its review based upon its reading of legislative events. It held that congressional reaction to various versions of Standard 208 "raise[d] doubts" that NHTSA's rescission "necessarily demonstrates an effort to fulfill its statutory mandate," and therefore the agency was obligated to provide "increasingly clear and convincing reasons" for its action. 220 U.S.App.D.C. at 186, 193, 680 F.2d 222, 229. Specifically, the Court of Appeals found significance in three legislative occurrences:

"In 1974, Congress banned the ignition interlock, but did not foreclose NHTSA's pursuit of a passive restraint standard. In 1977, Congress allowed the standard to take effect when neither of the concurrent resolutions needed for disapproval was passed. In 1980, a majority of each house indicated support for the concept of mandatory passive restraints, and a majority of each house supported the unprecedented attempt to require some installation of airbags."

Id. at 192, [680 F.2d 228](#). From these legislative acts and nonacts, the Court of Appeals derived a "congressional commitment to the concept of automatic crash protection devices for vehicle occupants." *Ibid.*

This path of analysis was misguided, and the inferences it produced are questionable. It is noteworthy that, in this Court, respondent State Farm expressly agrees that the postenactment legislative history of the Act does not heighten the

Page 463 U. S. 45

standard of review of NHTSA's actions. Brief for Respondent State Farm Mutual Automobile Insurance Co. 13. State Farm's concession is well taken, for this Court has never suggested that the standard of review is enlarged or diminished by subsequent congressional action. While an agency's interpretation of a statute may be confirmed or ratified by subsequent congressional failure to change that interpretation, *Bob Jones University v. United States*, [461 U. S. 574](#), [461 U. S. 599](#)-602 (1983); *Haig v. Agee*, [453 U. S. 280](#), [453 U. S. 291](#)-300 (1981), in the cases before us, even an unequivocal ratification -- short of statutory incorporation -- of the passive restraint standard would not connote approval or disapproval of an agency's later decision to rescind the regulation. That decision remains subject to the arbitrary and capricious standard.

That we should not be so quick to infer a congressional mandate for passive restraints is confirmed by examining the postenactment legislative events cited by the Court of Appeals. Even were we inclined to rely on inchoate legislative action, the inferences to be drawn fail to suggest that NHTSA acted improperly in rescinding Standard 208. First, in 1974, a mandatory passive restraint standard was technically not in effect, *see* [n 6, supra](#); Congress had no reason to foreclose that course. Moreover, one can hardly infer support for a mandatory standard from Congress' decision to provide that such a regulation would be subject to disapproval by resolutions of disapproval in both Houses. Similarly, no mandate can be divined from the tabling of resolutions of disapproval which were introduced in 1977. The failure of Congress to exercise its veto might reflect legislative deference to the agency's expertise, and does not indicate that Congress would disapprove of the agency's action in 1981. And even if Congress favored the Standard in 1977, it -- like NHTSA -- may well reach a different judgment, given changed circumstances four years later. Finally, the Court of Appeals read too much into floor action on the 1980 authorization bill, a bill which was not enacted into law. Other

Page 463 U. S. 46

contemporaneous events could be read as showing equal congressional hostility to passive restraints. [[Footnote 10](#)]

V

The ultimate question before us is whether NHTSA's rescission of the passive restraint requirement of Standard 208 was arbitrary and capricious. We conclude, as did the Court of Appeals, that it was. We also conclude, but for somewhat different reasons, that further consideration of the issue by the agency is therefore required. We deal separately with the rescission as it applies to airbags and as it applies to seatbelts.

A

The first and most obvious reason for finding the rescission arbitrary and capricious is that NHTSA apparently gave no consideration whatever to modifying the Standard to require that airbag technology be utilized. Standard 208 sought to achieve automatic crash protection by requiring automobile manufacturers to install either of two passive restraint devices: airbags or automatic seatbelts. There was no suggestion in the long rulemaking process that led to Standard 208 that, if only one of these options were feasible, no passive restraint standard should be promulgated. Indeed, the agency's original proposed Standard contemplated the installation of inflatable restraints in all cars. [[Footnote 11](#)] Automatic belts

Page 463 U. S. 47

were added as a means of complying with the Standard because they were believed to be as effective as airbags in achieving the goal of occupant crash protection. 36 Fed.Reg. 12859 (1971). At that time, the passive belt approved by the agency could not be detached. [[Footnote 12](#)] Only later, at a manufacturer's behest, did the agency approve of the detachability feature -- and only after assurances that the feature would not compromise the safety benefits of the restraint. [[Footnote 13](#)] Although it was then foreseen that 60% of the new cars would contain airbags and 40% would have automatic seatbelts, the ratio between the two was not significant as long as the passive belt would also assure greater passenger safety.

The agency has now determined that the detachable automatic belts will not attain anticipated safety benefits, because so many individuals will detach the mechanism. Even if this conclusion were acceptable in its entirety, *see infra*, at [463 U. S. 51](#)-54, standing alone, it would not justify any more than an amendment of Standard 208 to disallow compliance by means of the one technology which will not provide effective passenger protection. It does not cast doubt on the need for a passive restraint standard or upon the efficacy of airbag technology. In its most recent rulemaking, the agency again acknowledged the lifesaving potential of the airbag:

Page 463 U. S. 48

"The agency has no basis at this time for changing its earlier conclusions in 1976 and 1977 that basic air bag technology is sound and has been sufficiently demonstrated to be effective in those vehicles in current use. . ."

NHTSA Final Regulatory Impact Analysis (RIA) XI-4 (Oct.1981), App. 264. Given the effectiveness ascribed to airbag technology by the agency, the mandate of the Act to achieve traffic safety would suggest that the logical response to the faults of detachable seatbelts would be to require the installation of airbags. At the very least, this alternative way of achieving the objectives of the Act should have been addressed and adequate reasons given for its abandonment. But the agency not only did not require compliance through airbags, it also did not even consider the possibility in its 1981 rulemaking. Not one sentence of its rulemaking statement discusses the airbags-only option. Because, as the Court of Appeals stated, "NHTSA's . . . analysis of airbags was nonexistent," 220 U.S.App.D.C. at 200, [680 F.2d 236](#), what we said in *Burlington Truck Lines, Inc. v. United States*, 371 U.S. at [371 U. S. 167](#), is apropos here:

"There are no findings and no analysis here to justify the choice made, no indication of the basis on which the [agency] exercised its expert discretion. We are not prepared to, and the Administrative Procedure Act will not permit us to, accept such . . . practice. . . . Expert discretion is the lifeblood of the administrative process, but"

"unless we make the requirements for administrative action strict and demanding, expertise, the strength of

modern government, can become a monster which rules with no practical limits on its discretion."

"*New York v. United States*, [342 U. S. 882](#), [342 U. S. 884](#) (dissenting opinion)."

(Footnote omitted.) We have frequently reiterated that an agency must cogently explain why it has exercised its discretion in a given manner,

Page 463 U. S. 49

Atchison, T. & S. F. R. Co. v. Wichita Bd. of Trade, 412 U.S. at [412 U. S. 806](#); *FTC v. Sperry & Hutchinson Co.*, [405 U. S. 233](#), [405 U. S. 249](#) (1972); *NLRB v. Metropolitan Life Ins. Co.*, [380 U. S. 438](#), [380 U. S. 443](#) (1965); and we reaffirm this principle again today.

The automobile industry has opted for the passive belt over the airbag, but surely it is not enough that the regulated industry has eschewed a given safety device. For nearly a decade, the automobile industry waged the regulatory equivalent of war against the airbag [[Footnote 14](#)] and lost -- the inflatable restraint was proved sufficiently effective. Now the automobile industry has decided to employ a seatbelt system which will not meet the safety objectives of Standard 208. This hardly constitutes cause to revoke the Standard itself. Indeed, the Act was necessary because the industry was not sufficiently responsive to safety concerns. The Act intended that safety standards not depend on current technology, and could be "technology-forcing" in the sense of inducing the development of superior safety design. *See Chrysler Corp. v. Department of Transportation*, [472 F.2d 672](#)-673. If, under the statute, the agency should not defer to the industry's failure to develop safer cars, which it surely should not do, *a fortiori* it may not revoke a safety standard which can be satisfied by current technology simply because the industry has opted for an ineffective seatbelt design.

Although the agency did not address the mandatory airbag option and the Court of Appeals noted that "airbags seem to have none of the problems that NHTSA identified in passive seatbelts," 220 U.S.App.D.C. at 201, [680 F.2d 237](#), petitioners recite a number of difficulties that they

Page 463 U. S. 50

believe would be posed by a mandatory airbag standard. These range from questions concerning the installation of airbags in small cars to that of adverse public reaction. But these are not the agency's reasons for rejecting a mandatory airbag standard. Not having discussed the possibility, the agency submitted no reasons at all. The short -- and sufficient -- answer to petitioners' submission is that the courts may not accept appellate counsel's *post hoc* rationalizations for agency action. *Burlington Truck Lines, Inc. v. United States*, 371 U.S. at [371 U. S. 168](#). It is well established that an agency's action must be upheld, if at all, on the basis articulated by the agency itself. *Ibid.*; *SEC v. Chenery Corp.*, 332 U.S. at [332 U. S. 196](#); *American Textile Mfrs. Institute, Inc. v. Donovan*, [452 U. S. 490](#), [452 U. S. 539](#) (1981). [[Footnote 15](#)]

Petitioners also invoke our decision in *Vermont Yankee Nuclear Power Corp. v. Natural Resources Defense Council, Inc.*, [435 U. S. 519](#) (1978), as though it were a talisman under which any agency decision is by definition unimpeachable. Specifically, it is submitted that to require an agency to consider an airbags-only alternative is, in essence, to dictate to the agency the procedures it is to follow. Petitioners both misread *Vermont Yankee* and misconstrue the nature of the remand that is in order. In *Vermont Yankee*, we held that a court may not impose additional procedural requirements upon an agency. We do not require today any specific procedures

Page 463 U. S. 51

which NHTSA must follow. Nor do we broadly require an agency to consider all policy alternatives in reaching decision. It is true that rulemaking

"cannot be found wanting simply because the agency failed to include every alternative device and thought conceivable by the mind of man . . . regardless of how uncommon or unknown that alternative may have been. . . ."

Id. at [435 U. S. 551](#). But the airbag is more than a policy alternative to the passive restraint Standard; it is a technological alternative within the ambit of the existing Standard. We hold only that, given the judgment made in 1977 that airbags are an effective and cost-beneficial lifesaving technology, the mandatory passive restraint rule may not be abandoned without any consideration whatsoever of an airbags-only requirement.

B

Although the issue is closer, we also find that the agency was too quick to dismiss the safety benefits of automatic seatbelts. NHTSA's critical finding was that, in light of the industry's plans to install readily detachable passive belts, it could not reliably predict "even a 5 percentage point increase as the minimum level of expected usage increase." 46 Fed.Reg. 53423 (1981). The Court of Appeals rejected this finding because there is "not one iota" of evidence that Modified Standard 208 will fail to increase nationwide seatbelt use by at least 13 percentage points, the level of increased usage necessary for the Standard to justify its cost. Given the lack of probative evidence, the court held that "only a well justified refusal to seek more evidence could render rescission nonarbitrary." 220 U.S.App.D.C. at 196, [680 F.2d 232](#).

Petitioners object to this conclusion. In their view, "substantial uncertainty" that a regulation will accomplish its intended purpose is sufficient reason, without more, to rescind a regulation. We agree with petitioners that, just as an agency reasonably may decline to issue a safety standard if it is uncertain about its efficacy, an agency may also revoke a

Page 463 U. S. 52

standard on the basis of serious uncertainties if supported by the record and reasonably explained. Rescission of the passive restraint requirement would not be arbitrary and capricious simply because there was no evidence in direct support of the agency's conclusion. It is not infrequent that the available data do not settle a regulatory issue, and the agency must then exercise its judgment in moving from the facts and probabilities on the record to a policy conclusion. Recognizing that policymaking in a complex society must account for uncertainty, however, does not imply that it is sufficient for an agency to merely recite the terms "substantial uncertainty" as a justification for its actions. As previously noted, the agency must explain the evidence which is available, and must offer a "rational connection between the facts found and the choice made." *Burlington Truck Lines, Inc. v. United States*, *supra*, at [371 U. S. 168](#). Generally, one aspect of that explanation would be a justification for rescinding the regulation before engaging in a search for further evidence.

In these cases, the agency's explanation for rescission of the passive restraint requirement is not sufficient to enable us to conclude that the rescission was the product of reasoned decisionmaking. To reach this conclusion, we do not upset the agency's view of the facts, but we do appreciate the limitations of this record in supporting the agency's decision. We start with the accepted ground that, if used, seatbelts

unquestionably would save many thousands of lives and would prevent tens of thousands of crippling injuries. Unlike recent regulatory decisions we have reviewed, *Industrial Union Dept. v. American Petroleum Institute*, [448 U. S. 607](#) (1980); *American Textile Mfrs. Institute, Inc. v. Donovan*, [452 U. S. 490](#) (1981), the safety benefits of wearing seatbelts are not in doubt, and it is not challenged that, were those benefits to accrue, the monetary costs of implementing the Standard would be easily justified. We move next to the fact that there is no direct evidence in support of the agency's finding that detachable automatic belts cannot be predicted

Page 463 U. S. 53

to yield a substantial increase in usage. The empirical evidence on the record, consisting of surveys of drivers of automobiles equipped with passive belts, reveals more than a doubling of the usage rate experienced with manual belts. [[Footnote 16](#)] Much of the agency's rulemaking statement -- and much of the controversy in these cases -- centers on the conclusions that should be drawn from these studies. The agency maintained that the doubling of seatbelt usage in these studies could not be extrapolated to an across-the-board mandatory standard because the passive seatbelts were guarded by ignition interlocks and purchasers of the tested cars are somewhat atypical. [[Footnote 17](#)] Respondents insist these studies demonstrate that Modified Standard 208 will substantially increase seatbelt usage. We believe that it is within the agency's discretion to pass upon the generalizability of these field studies. This is precisely the type of issue which rests within the expertise of NHTSA, and upon which a reviewing court must be most hesitant to intrude.

But accepting the agency's view of the field tests on passive restraints indicates only that there is no reliable real-world experience that usage rates will substantially increase. To be sure, NHTSA opines that "it cannot reliably predict even a 5 percentage point increase as the minimum level of

Page 463 U. S. 54

expected increased usage." Notice 25, 46 Fed.Reg. 53423 (1981). But this and other statements that passive belts will not yield substantial increases in seatbelt usage apparently take no account of the critical difference between detachable automatic belts and current manual belts. A detached passive belt does require an affirmative act to reconnect it, but -- unlike a manual seatbelt -- the passive belt, once reattached, will continue to function automatically unless again disconnected. Thus, inertia -- a factor which the agency's own studies have found significant in explaining the current low usage rates for seatbelts [[Footnote 18](#)] -- works in *favor* of, not *against*, use of the protective device. Since 20% to 50% of motorists currently wear seatbelts on some occasions, [[Footnote 19](#)] there would seem to be grounds to believe that seatbelt use by occasional users will be substantially increased by the detachable passive belts. Whether this is in fact the case is a matter for the agency to decide, but it must bring its expertise to bear on the question.

The agency is correct to look at the costs as well as the benefits of Standard 208. The agency's conclusion that the incremental costs of the requirements were no longer reasonable was predicated on its prediction that the safety benefits of the regulation might be minimal. Specifically, the

Page 463 U. S. 55

agency's fears that the public may resent paying more for the automatic belt systems is expressly dependent on the assumption that detachable automatic belts will not produce more than "negligible safety benefits." *Id.* at 53424. When the agency reexamines its findings as to the likely increase in seatbelt usage, it must also

reconsider its judgment of the reasonableness of the monetary and other costs associated with the Standard. In reaching its judgment, NHTSA should bear in mind that Congress intended safety to be the preeminent factor under the Act:

"The Committee intends that safety shall be the overriding consideration in the issuance of standards under this bill. The Committee recognizes . . . that the Secretary will necessarily consider reasonableness of cost, feasibility and adequate leadtime."

S.Rep. No. 1301, 89th Cong., 2d Sess., 6 (1966).

"In establishing standards, the Secretary must conform to the requirement that the standard be practicable. This would require consideration of all relevant factors, including technological ability to achieve the goal of a particular standard as well as consideration of economic factors."

"Motor vehicle safety is the paramount purpose of this bill, and each standard must be related thereto."

H.R.Rep. No. 1776, 89th Cong., 2d Sess., 16 (1966).

The agency also failed to articulate a basis for not requiring nondetachable belts under Standard 208. It is argued that the concern of the agency with the easy detachability of the currently favored design would be readily solved by a continuous passive belt, which allows the occupant to "spool out" the belt and create the necessary slack for easy extrication from the vehicle. The agency did not separately consider the continuous belt option, but treated it together with the ignition interlock device in a category it titled "Option of Adopting Use-Compelling Features." 46 Fed.Reg. 53424

Page 463 U. S. 56

(1981). The agency was concerned that use-compelling devices would "complicate the extrication of [an] occupant from his or her car." *Ibid.* "[T]o require that passive belts contain use-compelling features," the agency observed,

"could be counterproductive[, given] . . . widespread, latent and irrational fear in many members of the public that they could be trapped by the seat belt after a crash."

Ibid. In addition, based on the experience with the ignition interlock, the agency feared that use-compelling features might trigger adverse public reaction.

By failing to analyze the continuous seatbelts option in its own right, the agency has failed to offer the rational connection between facts and judgment required to pass muster under the arbitrary and capricious standard. We agree with the Court of Appeals that NHTSA did not suggest that the emergency release mechanisms used in nondetachable belts are any less effective for emergency egress than the buckle release system used in detachable belts. In 1978, when General Motors obtained the agency's approval to install a continuous passive belt, it assured the agency that nondetachable belts with spool releases were as safe as detachable belts with buckle releases. 43 Fed.Reg. 21912, 21913-21914 (1978). NHTSA was satisfied that this belt design assured easy extricability: "[t]he agency does not believe that the use of [such] release mechanisms will cause serious occupant egress problems. . . ." *Id.* at 52493, 52494. While the agency is entitled to change its view on the acceptability of continuous passive belts, it is obligated to explain its reasons for doing so.

The agency also failed to offer any explanation why a continuous passive belt would engender the same adverse public reaction as the ignition interlock, and, as the Court of Appeals concluded, "every indication in the record points the other way." 220 U.S.App.D.C. at 198, 80 F.2d 234. [[Footnote 20](#)]

Page 463 U. S. 57

We see no basis for equating the two devices: the continuous belt, unlike the ignition interlock, does not interfere with the operation of the vehicle. More importantly, it is the agency's responsibility, not this Court's, to explain its decision.

VI

"An agency's view of what is in the public interest may change, either with or without a change in circumstances. But an agency changing its course must supply a reasoned analysis. . . ."

Greater Boston Television Corp. v. FCC, 143 U.S.App.D.C. 383, 394, [444 F.2d 841](#), 852 (1970) (footnote omitted), *cert. denied*, 403 U.S. 923 (1971). We do not accept all of the reasoning of the Court of Appeals, but we do conclude that the agency has failed to supply the requisite "reasoned analysis" in this case. Accordingly, we vacate the judgment of the Court of Appeals and remand the cases to that court with directions to remand the matter to the NHTSA for further consideration consistent with this opinion. [[Footnote 21](#)]

So ordered.

* Together with No. 82-365, *Consumer Alert et al. v. State Farm Mutual Automobile Insurance Co. et al.*; and No. 82-398, *United States Department of Transportation et al. v. State Farm Mutual Automobile Insurance Co. et al.*, also on certiorari to the same court.

[[Footnote 1](#)]

National Safety Council, 1982 Motor Vehicle Deaths By States (May 16, 1983).

[[Footnote 2](#)]

The Senate Committee on Commerce reported:

"The promotion of motor vehicle safety through voluntary standards has largely failed. The unconditional imposition of mandatory standards at the earliest practicable date is the only course commensurate with the highway death and injury toll."

S. Rep. No. 1301, 89th Cong., 2d Sess., 4 (1966).

[[Footnote 3](#)]

The Secretary's general authority to promulgate safety standards under the Act has been delegated to the Administrator of the National Highway Traffic Safety Administration (NHTSA). 49 CFR § 1.50(a) (1982). This opinion will use the terms NHTSA and agency interchangeably when referring to the National Highway Traffic Safety Administration, the Department of Transportation, and the Secretary of

Transportation.

[[Footnote 4](#)]

Early in the process, it was assumed that passive occupant protection meant the installation of inflatable airbag restraint systems. *See* 34 Fed.Reg. 11148 (1969). In 1971, however, the agency observed that "[s]ome belt-based concepts have been advanced that appear to be capable of meeting the complete passive protection options," leading it to add a new section to the proposed standard "[t]o deal expressly with passive belts." 36 Fed.Reg. 12859.

[[Footnote 5](#)]

The court did hold that the testing procedures required of passive belts did not satisfy the Act's requirement that standards be "objective." [472 F.2d 675](#).

[[Footnote 6](#)]

Because such a passive restraint standard was not technically in effect at this time due to the Sixth Circuit's invalidation of the testing requirements, *see* [n](#) 5, *supra*, the issue was not submitted to Congress until a passive restraint requirement was reimposed by Secretary Adams in 1977. To comply with the Amendments, NHTSA proposed new warning systems to replace the prohibited continuous buzzers. 39 Fed.Reg. 42692 (1974). More significantly, NHTSA was forced to rethink an earlier decision which contemplated use of the interlocks in tandem with detachable belts. *See* [n](#) 13, *infra*.

[[Footnote 7](#)]

No action was taken by the full House of Representatives. The Senate Committee with jurisdiction over NHTSA alternatively endorsed the Standard, S.Rep. No. 96-481 (1977), and a resolution of disapproval was tabled by the Senate. 123 Cong.Rec. 33332 (1977).

[[Footnote 8](#)]

Judge Edwards did not join the majority's reasoning on these points.

[[Footnote 9](#)]

The Department of Transportation suggests that the arbitrary and capricious standard requires no more than the minimum rationality a statute must bear in order to withstand analysis under the Due Process Clause. We do not view as equivalent the presumption of constitutionality afforded legislation drafted by Congress and the presumption of regularity afforded an agency in fulfilling its statutory mandate.

[[Footnote 10](#)]

For example, an overwhelming majority of the Members of the House of Representatives voted in favor of a proposal to bar NHTSA from spending funds to administer an occupant restraint standard unless the standard permitted the purchaser of the vehicle to select manual, rather than passive, restraints. 125 Cong.Rec. 36926 (1979).

[[Footnote 11](#)]

While NHTSA's 1970 passive restraint requirement permitted compliance by means other than the airbag, 35 Fed.Reg. 16927, "[t]his rule was a *de facto* air bag mandate, since no other technologies were available to comply with the standard." Graham & Gorham, NHTSA and Passive Restraints: A Case of Arbitrary and Capricious Deregulation, 35 Ad.L.Rev.193, 197 (1983). See [n 4](#), *supra*.

[\[Footnote 12\]](#)

Although the agency suggested that passive restraint systems contain an emergency release mechanism to allow easy extrication of passengers in the event of an accident, the agency cautioned that,

"[i]n the case of passive safety belts, it would be required that the release not cause belt separation, and that the system be self-restoring after operation of the release."

36 Fed.Reg. 12866 (1971).

[\[Footnote 13\]](#)

In April, 1974, NHTSA adopted the suggestion of an automobile manufacturer that emergency release of passive belts be accomplished by a conventional latch -- provided the restraint system was guarded by an ignition interlock and warning buzzer to encourage reattachment of the passive belt. 39 Fed.Reg. 14593. When the 1974 Amendments prohibited these devices, the agency simply eliminated the interlock and buzzer requirements, but continued to allow compliance by a detachable passive belt.

[\[Footnote 14\]](#)

See, e.g., Comments of Chrysler Corp., Docket No. 69-07, Notice 11 (Aug. 5, 1971) (App. 2491); Chrysler Corp. Memorandum on Proposed Alternative Changes to FMVSS 208, Docket No. 44, Notice 76-8 (1976) (App. 2241); General Motor Corp. Response to the Dept. of Transportation Proposal on Occupant Crash Protection, Docket No. 74-14, Notice 08 (May 27, 1977) (App. 1745). See also *Chrysler Corp. v. Department of Transportation*, [472 F.2d 659](#) (CA6 1972).

[\[Footnote 15\]](#)

The Department of Transportation expresses concern that adoption of an airbags-only requirement would have required a new notice of proposed rulemaking. Even if this were so, and we need not decide the question, it would not constitute sufficient cause to rescind the passive restraint requirement. The Department also asserts that it was reasonable to withdraw the requirement as written to avoid forcing manufacturers to spend resources to comply with an ineffective safety initiative. We think that it would have been permissible for the agency to temporarily suspend the passive restraint requirement or to delay its implementation date while an airbag mandate was studied. But, as we explain in text, that option had to be considered before the passive restraint requirement could be revoked.

[\[Footnote 16\]](#)

Between 1975 and 1980, Volkswagen sold approximately 350,000 Rabbits equipped with detachable passive seatbelts that were guarded by an ignition interlock. General Motors sold 8,000 1978 and 1979 Chevettes with a similar system, but eliminated the ignition interlock on the 13,000 Chevettes sold in 1980. NHTSA found that belt usage in the Rabbits averaged 34% for manual belts and 84% for passive belts. RIA at IV-

52, App. 108. For the 1978-1979 Chevettes, NHTSA calculated 34% usage for manual belts and 72% for passive belts. On 1980 Chevettes, the agency found these figures to be 31% for manual belts and 70% for passive belts. *Ibid.*

[[Footnote 17](#)]

"NHTSA believes that the usage of automatic belts in Rabbits and Chevettes would have been substantially lower if the automatic belts in those cars were not equipped with a use-inducing device inhibiting detachment."

Notice 25, 46 Fed.Reg. 53422 (1981).

[[Footnote 18](#)]

NHTSA commissioned a number of surveys of public attitudes in an effort to better understand why people were not using manual belts and to determine how they would react to passive restraints. The surveys reveal that, while 20% to 40% of the public is opposed to wearing manual belts, the larger proportion of the population does not wear belts because they forgot or found manual belts inconvenient or bothersome. RIA at IV-25, App. 81. In another survey, 38% of the surveyed group responded that they would welcome automatic belts, and 25% would "tolerate" them. *See* RIA at IV-37, App. 93. NHTSA did not comment upon these attitude surveys in its explanation accompanying the rescission of the passive restraint requirement.

[[Footnote 19](#)]

Four surveys of manual belt usage were conducted for NHTSA between 1978 and 1980, leading the agency to report that 40% to 50% of the people use their belts at least some of the time. RIA at IV-25, App. 81.

[[Footnote 20](#)]

The Court of Appeals noted previous agency statements distinguishing interlocks from passive restraints. 42 Fed.Reg. 34290 (1977); 36 Fed.Reg. 8296 (1971); RIA at II-4, App. 30.

[[Footnote 21](#)]

Petitioners construe the Court of Appeals' order of August 4, 1982, as setting an implementation date for Standard 208, in violation of *Vermont Yankee's* injunction against imposing such time constraints. *Vermont Yankee Nuclear Power Corp. v. Natural Resources Defense Council, Inc.*, [435 U.S. 519](#), [435 U.S. 544-545](#) (1978). Respondents maintain that the Court of Appeals simply stayed the effective date of Standard 208, which, not having been validly rescinded, would have required mandatory passive restraints for new cars after September 1, 1982. We need not choose between these views, because the agency had sufficient justification to suspend, although not to rescind, Standard 208, pending the further consideration required by the Court of Appeals, and now, by us.

JUSTICE REHNQUIST, with whom THE CHIEF JUSTICE, JUSTICE POWELL, and JUSTICE O'CONNOR join, concurring in part and dissenting in part.

I join Parts I, II, III, IV, and V-A of the Court's opinion. In particular, I agree that, since the airbag and continuous

Page 463 U. S. 58

spool automatic seatbelt were explicitly approved in the Standard the agency was rescinding, the agency should explain why it declined to leave those requirements intact. In this case, the agency gave no explanation at all. Of course, if the agency can provide a rational explanation, it may adhere to its decision to rescind the entire Standard.

I do not believe, however, that NHTSA's view of detachable automatic seatbelts was arbitrary and capricious. The agency adequately explained its decision to rescind the Standard insofar as it was satisfied by detachable belts.

The statute that requires the Secretary of Transportation to issue motor vehicle safety standards also requires that "[e]ach such . . . standard shall be practicable [and] shall meet the need for motor vehicle safety." 16 U.S.C. § 1392(a) (1976 ed., Supp. V). The Court rejects the agency's explanation for its conclusion that there is substantial uncertainty whether requiring installation of detachable automatic belts would substantially increase seatbelt usage. The agency chose not to rely on a study showing a substantial increase in seatbelt usage in cars equipped with automatic seatbelts and an ignition interlock to prevent the car from being operated when the belts were not in place and which were voluntarily purchased with this equipment by consumers. *See ante* at [463 U. S. 53](#), n. 16. It is reasonable for the agency to decide that this study does not support any conclusion concerning the effect of automatic seatbelts that are installed in all cars, whether the consumer wants them or not, and are not linked to an ignition interlock system.

The Court rejects this explanation because "there would seem to be grounds to believe that seatbelt use by occasional users will be substantially increased by the detachable passive belts," *ante* at [463 U. S. 54](#), and the agency did not adequately explain its rejection of these grounds. It seems to me that the agency's explanation, while by no means a model, is adequate. The agency acknowledged that there would probably be some increase in belt usage, but concluded that the increase would be small, and not worth the cost of mandatory

Page 463 U. S. 59

detachable automatic belts. 46 Fed.Reg. 53421-53423 (1981). The agency's obligation is to articulate a "*rational connection between the facts found and the choice made.*" *Ante* at [463 U. S. 42](#), [463 U. S. 52](#), quoting *Burlington Truck Lines, Inc. v. United States*, [371 U. S. 156](#), [371 U. S. 168](#) (1962). *I believe it has met this standard.*

The agency explicitly stated that it will increase its educational efforts in an attempt to promote public understanding, acceptance, and use of passenger restraint systems. 46 Fed.Reg. 53425 (1981). It also stated that it will

"initiate efforts with automobile manufacturers to ensure that the public will have [automatic crash protection] technology available. If this does not succeed, the agency will consider regulatory action to assure that the last decade's enormous advances in crash protection technology will not be lost."

Id. at 53426.

The agency's changed view of the standard seems to be related to the election of a new President of a

different political party. It is readily apparent that the responsible members of one administration may consider public resistance and uncertainties to be more important than do their counterparts in a previous administration. A change in administration brought about by the people casting their votes is a perfectly reasonable basis for an executive agency's reappraisal of the costs and benefits of its programs and regulations. As long as the agency remains within the bounds established by Congress, [463 U. S.](#)

* Of course, a new administration may not refuse to enforce laws of which it does not approve, or to ignore statutory standards in carrying out its regulatory functions. But in this case, as the Court correctly concludes, *ante* at [463 U. S. 44](#)-46, Congress has not required the agency to require passive restraints.
