[REDACTED],

Here is a draft, that [REDACTED] has started. It is a great start. I will be adding to it tonight.

1	<i>Executive Summary</i>	<i>1</i>
2	<i>recommended changes to the exchange journaling process</i>	<i>1</i>
3	<i>Recommended procedure to search combined psts prior to data cleanup</i>	<i>2</i>
4	<i>Recommended Procedure to resolve Combined PSTS</i>	<i>3</i>

1 EXECUTIVE SUMMARY

2 RECOMMENDED CHANGES TO THE EXCHANGE JOURNALING PROCESS

- Migrate all pst files to
- will remain intact until approval has been received from WH counsel to decommission that server.
- Create a drive with the directory structure as described in figure 1.1. There will be one drive for each year of administration beginning in 2001. All drives from 2001 – 2004 will contain 25 GB of overhead space. All drives with data from 2005 – 2008 will be 2 TB in size. The drive ear-marked for 2009 data will be 100GB when created. Space will be allocated for data through 2006. If the ECRMS project is not complete by 2007, space will be allocated for 2007 and 2008 email as needed.

Figure 1.1

- Once the file structure is intact, data will be migrated from : ' to
- The structure of all drives on is listed in the appendix.
- All data will be migrated using robocopy. A log of the copy that shows source and destination location will be archived to ensure data integrity is maintained. Log files will be stored on until permission to remove them has been received from WH counsel.
-

Advantages

- File space on the SAN is extremely expensive. By grouping the data into years, 2001 – 2004 data can be stored there with limited overhead on each partition.
- Space can be more appropriately allocated if divided by year than if it is divided by component.

3 RECOMMENDED PROCEDURE TO SEARCH COMBINED PSTS PRIOR TO DATA CLEANUP

Due to a change that inadvertently modified the company name attribute on all users objects in the Active Directory, all email from August 10, 2005 to October 4, 2005 was stored in the in the OA Component Journal PST. It is estimated that the data cleanup process will take 60 days. The procedure listed below will be used to complete all searches between now and when the data cleanup is complete.

- Search all PST files created from August 10, 2005 to October 4, 2005 using the current practices.
- Once the initial output has been received, obtain a list of users from the GAL for each agency that were present from August 10, 2005 to October 4, 2005.
- Create a rule in outlook that moves data to a folder based on the To: and From: fields.
- Run the outlook rule to generate the final results.
- If necessary, follow the duplicate removal process.

4 RECOMMENDED PROCEDURE TO RESOLVE COMBINED PSTS

Due to a change that inadvertently modified the company name attribute on all users objects in the Active Directory, all email from August 10, 2005 to October 4, 2005 was stored in the in the OA Component Journal PST. The process below outlines the recommended steps to separate that email by component.

- Search all of the pst files from August 10, 2005 to October 4, 2005 using the Find-It utility. Use the following searches strings to copy email from the current pst files into separate pst file store by component.
 - All email sent by COMPONENT_ALL users.
 - All email sent to COMPONENT_ALL users.
- It is important to note that this process could result in numerous duplicate messages being created. When a search is conducted these duplicates will need to be manually removed prior to submitting to general counsel.
