

DISCUSS: U.S. MOBILE DATA COMPARED TO REST OF GLOBE

[NB: Check the byline, thanks. /~Rayne]

I think I'm making things too hard on myself trying to write posts. Sometimes the material is self-evident. Like this:

Cost of 1GB of mobile data:

India 🇮🇳: \$0.09 (lowest)

Israel 🇮🇱: \$0.11

United States 🇺🇸: \$8

Canada 🇨🇦: \$12.55

Discuss the reasons why the U.S. is so non-competitive with other developed nations including some that are less developed, and nearly all that are smaller economies, when it comes to mobile data.

You'll note this is just a comparison of pricing and not speed or accessibility. It's not good. How do we fix this?

Do note the tweeter, Vala Afshar – his employer relies on mobile data. Why is our country holding his employer back and so many others who also rely on mobile data?
